

High-performance rotary burr that can withstand the majority of metals and composite metals. Teeth with chip-breakers guaranteed an excellent surface condition and ease of use.

- Chip breaker teeth
- Cylindrical shank
- Carbide head

1 cylindrical + 1 cylindrical rounded + 1 ogive + 1 ogive rounded + 1 conical rounded HALF TIVOLY BOX case

Machine

Application

K	M	N	P 1
K- Ferrous Cast iron with Short Chips	M- Stainless steels	N- Non- ferrous alloys	P1- Unrealized steels

Features

Properties and benefits

- + Chip-breaking teeth: teeth designed for their high versatility, diamond cutting for the excellent breaking up of chips. ➡ Enables the effective filing of the majority of metals, excellent chip breaking, and neat surface conditions.
- + 6 mm cylindrical shank: for excellent clamping in pneumatic or electric straight grinding machines ➡ Attachment suitable for the clamps of straight pneumatic or electric grinding machines.
- + Tungsten carbide head: ground in a grade of carbide especially suited for high rotation speeds. ➡ Enables an excellent throughout rate and very high resistance to wear, suitable for very high rotation speeds in the majority of metals.
