

The Torsion bit: ideal for screwing into metal and hard materials | Torsion effect.

- 6.35 mm hexagonal shank
- Torsion breakage-resist.
- TiN coating
- Non-slip diamond
- With colored ring

4 slotted bits + 3 PZ bits + 3 PH bits + 7 TX bits + 4 Hex. + 1 magnetic Quick-Change bit holder

#### Machine

#### Features

#### Properties and benefits

- + 6.35 mm hexagonal shank / DIN 3126 C 6.3 standard: geometric characteristics comply with dimensional standards. ➡ Enables a perfect hold with bit-holders.
- + Break-resistant twist: reduced central geometry and special thermal treatment that absorbs peak screwing forces and extreme torque variations. ➡ Prevents the premature breakage of the bit, as well as its premature wear, for a longer service life.
- + TiN coating: surface treated with titanium nitride, for resistance to wear. ➡ Enables greater longevity of the screwdriver bit and protection against corrosion.
- + Non-slip diamond: screwdriver bits equipped with a diamond micro-particle coating. Reduces the forces of rejection and lowers the compression force. ➡ Prevents slipping off the screw. Enables safe, fast, and efficient work, especially in soft or expensive materials.
- + With different color rings depending on the screw heads ➡ For the simple and fast recognition of screw head types. Each screw head has its own colour code
