

# 1152332 | Screwdriver bit - IMPACT Torsion diamond - For Phillips screws **TECHNIC (Blister)**

The Torsion **DIAMOND** bit for demanding screwing jobs. Can withstand use in an impact screwdriver. Diamond coating for more bite in the screws and **TIN** coating to prevent premature wear. Torsion effect.

- Breakage-resistant tool
- Non-slip coating
- Maximum long life
  
- 6.35 mm hexagonal shank
- With colored ring
- Non-slip diamond
- For impact machines
- Torsion breakage-resist.

## Machine

## Features

## Properties and benefits

- + 6.35 mm hexagonal shank / DIN 3126 C 6.3 standard: geometric characteristics comply with dimensional standards. ➡ Enables a perfect hold with bit-holders.
- + With different color rings depending on the screw heads ➡ For the simple and fast recognition of screw head types. Each screw head has its own colour code
- + Non-slip diamond: screwdriver bits equipped with a diamond micro-particle coating. Reduces the forces of rejection and lowers the compression force. ➡ Prevents slipping off the screw. Enables safe, fast, and efficient work, especially in soft or expensive materials.
- + Shock Series Impact: geometry and material specifically designed for use on high-power impact machines. ➡ Resistant to high tightening torques and can handle all seized screws and bolts.
- + Break-resistant twist: reduced central geometry and special thermal treatment that absorbs peak screwing forces and extreme torque variations. ➡ Prevents the premature breakage of the bit, as well as its premature wear, for a longer service life.
