**Properties and benefits**

- + 6.35 mm hexagonal shank / DIN 3126 C 6.3 standard: geometric characteristics comply with dimensional standards. ➡ Enables a perfect hold with bit-holders.
- + With different color rings depending on the screw heads ➡ For the simple and fast recognition of screw head types. Each screw head has its own colour code
- + Anti-rust stainless steel: inserting a stainless steel screw with an ordinary steel bit creates a transfer of particles that is responsible for rust. ➡ Keep your stainless steel screws clean to maintain the aesthetic appeal of your exterior fittings, as well as fittings within a saline environment.
- + Break-resistant twist: reduced central geometry and special thermal treatment that absorbs peak screwing forces and extreme torque variations. ➡ Prevents the premature breakage of the bit, as well as its premature wear, for a longer service life.
