

# 1T50212 | Jigsaw blade - For shelves - T attachment TECHNIC (Blister)

High-alloy vanadium chrome steel is used for working on softer materials such as wood, fiberboard panels, and synthetic materials.

- Cross ground, tapered
- Inverted toothing
- Carbon steel toothing

### Machine

### Application

Shelves

### Features

### Properties and benefits

- + Cross ground, tapered: each tooth is perpendicular to the cutting axis, is aligned, and cuts along its entire width. The sides and the back are tapered. ➡ Enables fast and straight cutting. The blade does not come back into contact with the material and enables a fine and clean cut.
- + Inverted toothing: blade whereby the teeth cut while moving downward. Inverted teeth: blade whereby the teeth cut while moving downwards. ➡ Enables clean cuts without splinters on the top side. For an optimal result, disable the machine's pendulum function.
- + Blade made from HCS carbon steel: high-strength carbon steel ideal for cutting into soft wood and non-abrasive carpentry materials. ➡ Enables longer service life thanks to the flexibility of the blade.
