

XT50134 | Circular saw blade - Finishing - For plastic, aluminium, hard wood - For radial and table saw

ESSENTIAL (Carton sleeve)

Ideal for the precise and splinter-free cutting of soft, non-ferrous metals, PVC, aluminium frames and metal sheet.

- TCG tooting
- TCG-N tooting
- Expansion slots
- Anti-kickback heel

Machine

Application

Stainless steel sheet Sheet metal Plastic

Features

Properties and benefits

- + Trapezoidal / flat teeth: consisting of alternating flat and trapezoidal teeth, which are set a little higher. ➡ Enables pre-cutting over a width that is smaller than the definitive width. Avoids splinters in fragile materials.
- + TCG tooting with a negative angle of attack. Teeth angled towards the rear for portable, radial and table saws. ➡ Relieves cutting effort. Thus, the risk of kickback during the attack are reduced, and safety improved.
- + Expansion slots: these are distributed along the outer edges of the disc. ➡ They allow the metal to expand when it heats as a result of friction, thus avoiding the deformation of the blade.
- + Anti-kickback heel: the presence of an anti-kickback heel is vital. They are located at the back of the teeth. ➡ Limits the quantity of material removed by each tooth of the blade. Thus prevents excessive cutting effort and eliminates wood emissions.
